Union University

Is the result of 14 years of arduous exertion on the part of the Baptist Education Society of Tennessee, with the generous aid of their Brethren throughout this State, and North Alabama and Mississippi.

The Institution, at first, was merely a High School. In January, 1848, it was organized as a College: since which time, the number of Students has regularly and rapidly increased to the present number.

For the endowment of the University $55,000 have already been secured. The Agent is still in the field, and the amount is expected in a few years to be raised to $100,000. Our means are ample, and we are determined that this school shall be liberally sustained and be in no respect inferior to any in our country, North or South.

The University is located near Murfreesborough, a handsome, thriving and healthy village of 2500 inhabitants,—the county seat of Rutherford county, in the centre of one of the finest regions in the State; and indeed, within a few rods of the centre of the State itself.

The Presbyterian, Methodist, and Baptist denominations have flourishing Churches. The inhabitants are noted for their morality and intelligence; and the country around is full to overflowing of the means of living—furnishing them as low as at any other place.

Murfreesborough is now accessible in almost every direction by good turnpike roads, either completed or in progress, and when the great Southern Railroad from Nashville to Charleston shall have been completed—as is contemplated at an early day—every desirable facility for travel and communication with the adjoining portions of this and our sister States will have been attained.

The new College edifice is up, and will be ready for the reception of students by the middle of September. It occupies a site of great elegance, on a beautiful *Campus*, nearly a mile from the public square, commanding a fine view of the town and surrounding country.

It contains a Chapel, rooms for the various Classes, and for the Libraries of the two Literary Societies, and also for the University Library, each of which contains a number of valuable books. A Philosophical and Chemical Aparatus are secured.

This College is designed to furnish all the facilities requisite for secu-

ring to the Students a thorough Collegiate education. Its course is onward, we trust. Already we regard it as occupying, in character and influence, a high stand among the Institutions of our country.

ADMISSION.

I—Candidates for the Freshman Class are required to be, first, 14 years of age; second, well versed in the studies of the Preparatory Department; third to be furnished with testimonials of good moral character, and if from another Institution, with certificates of their standing from the President or Faculty.

II—For admission into a higher Class, every Student, in addition to the above, is examined on all the previous studies of the class he wishes to enter.

III.—It is very desirable that those who intend graduating at this Institution should enter at least the Freshman Class, if not the Preparatory Department, rather than prepare themselves elsewhere. If we are to be held accountable for their scholarship, we would also seek the honor, and share the responsibility of laying a foundation for that permanent and finished superstructure—a *thorough education*.

IV.—Nor is it less desirable that Students be well *drilled* in the Preparatory studies. All experience has shown that no one loves a study he cannot understand. Loss of interest, discouragement, idleness, and all the temptations attendant thereon, follow in rapid succession, and what at first seemed a matter of no importance, decides the weal or wo of many a noble youth. No parent or guardian may lightly disregard this duty.

COLLEGIATE DEPARTMENT.

We have endeavored so to alter the arrangement of the studies of this Department as to bring them within the capacity of the majority of Students without lowering the standard of acquirement.

To require the greatest amount of labor during the Freshman and Sophomore years, overtasks the mind when less disciplined and less capable of application and when studies are new: and moreover exposes the student to the temptation of breaking off from his studies, and with perhaps enfeebled or even ruined health; aud he leaves College, with his education half completed.

By removing some studies further onward in the course, it is believed that a youth of ordinary ability can pursue the series throughout with pleasure and success.

ENGLISH AND SCIENTIFIC COURSE.

The present wants of the South and West seem to require that our University should furnish facilities for study to such young men as have not time or may not find it convenient, to pursue a Classical course, but who

wish to secure a better English and scientific education than can be obtained in our Academies.

For the accommodation of such, a course to embrace a period of three years has been prescribed, which, when they shall have satisfactorily finished, they will be entitled to a certificate signed by the President of the University.

The requirements as to moral character and charges for Tuition will be the same as in the regular College course.

Any Student may pursue such studies as he may select, with the regular classes, provided he has three regular recitations each day.

EXAMINATIONS.

There will be two Examinations each Collegiate year; one at Christmas, and one in July.

They will be rigid; and in no case will a student be suffered to advance to a higher class unless it shall appear to the Faculty and Examining Committee that, by diligence and successful application, he has entitled himself to such promotion.

TERMS AND VACATIONS.

First Term.—From Sept. 17th to Dec. 25th—Vacation, 2 weeks.

Second Term.—From Jan'y 1st to July 17th, " 8 weeks.

It is highly important that each Student return by the *first day of each term.* The deficiency created by the loss of a few recitations then, is seldom made up, even with talent and industry.

GOVERNMENT.

It is designed, by mild but firm treatment, to secure attention to study; and a correct deportment by appealing to the better feelings of the heart, and by cultivating a taste for intellectual pursuits and virtuous habits. Should it be found that a Student is not restrained by such influences, the Faculty will deem that they have discharged their duty towards him, and he will be immediately returned to his friends.
